Special Assembly: - **World Ozone Day**

Date – 16.09.2021

Teacher In charge – Ms. Swati

Ozone layer is a gaseous layer present in our atmosphere to protect us from the harmful U.V Rays coming from the sun but the ozone layer is slowly depleting over the years. In absence of ozone layer, we are exposed to those U.V Rays which can cause many dangerous diseases. To educate the children about the importance of ozone layer a special assembly was conducted. In the assembly at first the importance of 16th September – “**World ozone day**” was explained, then the major components of ozone were discussed and after this they were also told about the hole in the ozone layer. A student, Ananya, from class 8th demonstrated an experiment to explain the ways to prevent the ozone layer depletion.

The Youtube link of special assembly is mentioned below :-
