

Report on World soil day, 5.12.25

On 5 December, World Soil Day was marked through a special assembly organized by the school to highlight the importance of soil in sustaining life. The assembly featured an engaging skit presented by students, which effectively showcased the vital role of soil in agriculture, food security, and environmental balance. Through their performance, students illustrated the harmful effects of pollutants such as industrial waste, excessive use of chemical fertilizers, plastics, and pesticides on soil health. The skit also emphasized practical measures to protect and restore soil quality, including reducing chemical usage, promoting organic farming, proper waste management, afforestation, and spreading awareness about sustainable practices. The assembly successfully sensitized students to the need for conserving soil and encouraged everyone to take responsible actions to protect this valuable natural resource.
